

Instructions for Use

The Oz-Pet litter tray is designed specifically for use with Oz-Pet wood litter. The tray is made up of two parts, with the top section used as a sieve. When Oz-Pet is wet, it breaks down into smaller particles, which then fall through into the bottom tray when shaken once or twice a day.

"Scoop out Solids"

After scooping out the solids the tray is ready to be worked.

"Shake the tray to separate the wet fines"

Shake the tray to separate the wet fines from the good litter. If there are a lot of fines in the tray a stir with the scoop will help.

"The wet fines are separated"

The wet fines fall through into the bottom tray.

"The Wet fines are in the Bottom"

Leaving the good, dry litter in the top, ready to use again.
